

Vent-Gard

Unique explosion protection to better suit your requirements

Elfab's foam backed explosion vent range, Vent-Gard, is specifically designed to protect against explosions in silos and bucket elevators. The range combines unique design and manufacturing process with the optional ability for you to tailor the design to suit your exact needs- with or without frame; with or without the additional benefit of Elfab's magnetic detection system Flo-Tel™ - one panel 4 options.

This unique range of explosion vents comes in stainless steel as standard with cross linked polyethylene foam back. The non-fragmenting design is available in a range of standard sizes as either rectangular or square.

Elfab has advanced 3D laser cutting and testing facilities that enable us to produce competitively priced, certified opening explosion vents in any configuration and in any bolt pattern.

- Suitable for indoor and outdoor environments
- Resistant to abrasion, corrosion and moisture
- Maintenance Free
- Dust tight seal

	Panel	Frame	Flo-Tel+ detection
Vent-Gard	Yes	No	No
Vent-Gard with Frame	Yes	Yes	No
Vent-Gard with Detection	Yes	No	Yes
